

WINDOWS AND DOORS

The most popular choice for Finnish homes.

OUR PIHLA PRODUCTS

Pihla windows and doors are among the most popular in Finland. Their appearance, strong structures, optional accessories and energy-efficiency make it easy to choose windows and doors. Pihla's products can be trusted in all situations!

RIISING TO THE CHALLENGE

Our range includes windows and doors for repairing the old as well as for building new. The selection consists of three window models: triple-glazed opening Varma, quadruple-glazed opening Termo and Fixed windows. Our wide range of doors includes products from storehouse and balcony doors to an impressive new external door range. Sliding doors are also included in Pihla's product range.

VERSATILE PIHLA

Thanks to their durable joints and notable material strengths, Pihla products are suitable for many types of buildings. The products represent cutting-edge technology and are versatile. There are several colour options and accessories available.

PRESENTABLE RANGE

We make all our windows and doors to measure, which enables customised solutions for both new buildings and renovation jobs. The size and shape can be freely selected. The frame depth, handedness options, glazing and accessories are also designed together to best meet your needs.

MADE IN FINLAND

All Pihla windows, balcony doors and external doors are made at Pihla Group's factories in Finland with decades of experience.

MAKE YOUR HOME FUNCTIONAL

Windows affect surprisingly many things. Innovative features and diverse accessories of Pihla windows and doors help you make your home functional for decades to come.

✓ ENERGY EFFICIENT

Windows play an important role in the energy efficiency of your home. Energy-efficient windows also significantly reduce the carbon footprint of housing. At their best, energy-efficient windows can reduce heating energy emissions by up to 25%.

✓ GOOD INDOOR AIR QUALITY

Indoor air quality has a significant impact on both human health and living comfort. Healthy and clean indoor air can also be ensured by the choice of windows instead of costly ventilation renovations or wall vents.

✓ SAFE

In many ways, new windows and doors are safer than old and worn-out ones. In addition, our products come with diverse features and accessories that can be used to further increase safety and comfort.

✓ GOOD CONNECTIONS

Improving the energy efficiency of homes is a growing trend, but it can also lead to mobile signals being blocked from getting inside. In practice, this means that there is poor mobile signal strength and mobile internet connection tends to freeze. Fortunately, we have a solution to this problem. Pihla Antenna Glass ensures functional connections without compromising on energy efficiency.

PIHLA'S SMALLER CARBON FOOTPRINT

In order to reduce the carbon footprint of our products throughout their life cycle, we take environmental considerations into account in everything we do. As part of the Pihla Group's sustainability principles, we are committed to halving carbon dioxide emissions from all our operations from the 2019 level by 2030. Our operations will be carbon-neutral by 2050.

RESPONSIBLE OPERATIONS

Pihla is committed to sustainable development and a responsible business model, which is based on the UN's Sustainable Development Goals. We focus on being environmentally friendly, creating a good workplace and conducting responsible business operations, which enable us to promote a better and more sustainable future for us all.

THE PRODUCT'S ENTIRE LIFE CYCLE RESPECTING THE ENVIRONMENT

Careful material choices, an optimised manufacturing process and modern product development play

an important role in reducing our carbon footprint. In addition, we minimise transport emissions and pay attention to recyclability, both for raw materials and end-of-life products.

We are constantly working to find greener solutions, and are delighted to be able to say that we have managed to optimise certain areas of our operations to become completely carbon-neutral. Our factory uses an environmental product card verified by a third party, the Building Information Foundation RTS, which we use to monitor the development of our product's carbon footprint.

VARMA WINDOWS

RELIABLE AND DURABLE

Pihla Varma is a double-sash, inward opening wood-aluminium window with a double-glazed insulating glass unit in the inner sash. The outer sash is made of aluminium and has one pane of glass. Pihla Varma is a reliable basic window and a suitable option for all properties. The 25-year guarantee against decay we issue for the window speaks for Varma's reliability and durability.

A PIONEER IN TIGHTNESS

Varma has three sealing surfaces: two seals in the inner sash and one in the outer sash. Varma has achieved top results in air-tightness, water-tightness and wind-pressure resistance tests. Varma is stylish and elegant as well as tightly sealed and reliable.

STRONG STRUCTURE

The solid woodwork of the frames and sashes is equipped with traditional, durable joints. The inner sash, made of pine, is strong and has an energy-efficient insulating glass unit. The aluminium outer sash has steel locks and sturdy hinges.

RANGE

In addition to the basic window, the Varma window is also available as an EI30 class fire window, emergency exit window and inlet air window with inlet air valves.

TERMO WINDOWS

TERMO

- U-value as low as 0.59
- Energy rating up to A++

TERMO PALO

- EI 30 and EI 15

A++

* Up to A++ depending on glass selection

ENERGY-SAVING SOLUTION

The low-energy alternative Pihla Termo is a double-sash wood-aluminium window with an insulating glass unit in both sashes. Compared with traditional triple-glazed windows, the Termo solution helps achieve considerably better heat insulation and protection against the sun's heat radiation. The better heat economy the windows offer, the more comfortable the home is to live in.

FAMILIAR STRONG PIHLA

Termo offers the familiar structure of Pihla windows: durable wood and aluminium sections, sturdy joints and a ventilated structure between the timber and the external aluminium. Pihla Termo windows have a 25-year guarantee against decay.

WIDE RANGE OF ACCESSORIES

The most popular optional accessories and options are the appropriate glazing solutions, decorative lattices, blinds, mosquito sashes, ventilation valves and, as in Varma windows, a decorative or straight inner sash. Pihla Termo is also available as an EI30-class fire window and inlet air window.

The quadruple-glazed Pihla Termo energy-saving window has been designed by taking the tightening heat insulation requirements into consideration. Thanks to continuous product development, Termo windows always have the best glazing solutions and equipment level.

FIXED WINDOW

VARMA

INCREASING POPULARITY

The interior of the fixed windows is timber, and the external cladding is aluminium. Thanks to the energy-saving insulation glass, fixed windows have an energy rating of up to A++. The popularity of Pihla Fixed windows has constantly been increasing thanks to their advanced glazing solution and excellent energy-efficiency. The soundproofing in Pihla Fixed windows is also excellent.

A PART OF THE PRODUCT FAMILY

The fixed windows can be mixed and matched with other Pihla windows, thanks to their uniform colour selection and frame depth. The fixed and opening windows have a uniform pressed metal sill line, making it easy to install them side by side.

GREAT APPEARANCE

The glazing uses durable rubber seals both inside and out. The end result is elegant and tightly sealed. Pihla Fixed has achieved excellent results in air-tightness, water-tightness and wind-pressure resistance tests.

RANGE

In addition to triple-glazed Varma and quadruple-glazed Termo structures, fixed windows are also available as an EI30-class fire window.

BLACK WINDOWS

Black window frames are not losing their allure. Pihla's black windows are completely black up to the hinges, from the inside and outside. They give a great appearance to the home. We make black windows as opening and fixed windows.

OPENING BLACK WINDOW

Termo BLACK is not only stylish but also features advanced design. The special glazing of the window has been specially made to fit the black window, as it protects the frames and structures from overheating caused by the sun.

FIXED BLACK WINDOW

Pihla Fixed windows can also be manufactured entirely in black. The window contains a triple thermal glass element with a selective glass and black element spacers.

Pihla 

PIHLA WOODEN WINDOW

WOODEN WINDOW

- U-värde 1,0 ... 0,8

TRADITIONAL AND TIMELESS STYLE

The design of Pihla's MSE wooden casement window takes into account the old building stock in Finland with its original windows. The Puuikkuna wooden window imitates the style of the 1960s and 1970s, when metal parts were not yet used in exterior surfaces and the protruding drip moulding gave facades a distinctive look.

The wooden window, which is part of the Pihla ECO product family, is an excellent choice in terms of both style and function, not forgetting the low carbon footprint of the wood. A straight-line or decorative interior frame design is available for the inside of the window. Colour options for the wooden window include opaque and translucent finishes for both the inside and the outside.

FOR FINNISH WEATHER CONDITIONS

The wooden window is designed to withstand the varying weather conditions in Finland. The exterior wooden parts are thoroughly treated, from the base treatment to the surface treatment, to maximise the maintenance interval. The wooden window has a drip moulding made of low-emission aluminium, which channels rainwater to the flashing and protects the wooden parts from the weather damage caused by moisture and frost.

The wooden window has a drip moulding made of low-emission aluminium, which channels rainwater to the flashing. The matte-painted drip moulding is elegant in its simplicity and protects the wood from the weathering caused by moisture and frost.

PIHLA KESÄMÖKKI WINDOWS FOR COTTAGES

The Pihla Kesämökki product family is suitable for both recreational dwelling renovators and new holiday home builders. The frame depths and glazing of the Kesämökki products have been specifically designed for the needs of cottages, leisure homes and outbuildings. The frame depth is 95 mm in the opening Kesämökki window and 92 mm in the fixed window as well as the Kesämökki door.

Various glass options are also available for the Kesämökki windows and doors, as needed. The colour options are the same as those for other Pihla products. The aluminium surfaces on the outside of the windows ensure good weather resistance and easy care.

PIHLA MÖKKI – OPENING WINDOW

Flat glass in both sashes. The inner sash can also be equipped with double insulating glazing. The outer sash and cladding are durable aluminium.

PIHLA MÖKKI – FIXED WINDOW

An easy-to-maintain wood-aluminium window with only two glass surfaces to wash. The window has a double insulating glass.

PIHLA EXTERNAL DOORS

A DIVERSE SELECTION

Pihla doors are available in several different structures designed for different applications:

- Varma is our most popular external door, whose thick door leaf and double sealing make it a very warm front door.
- The Termo structure is designed for the best thermal insulation and low energy construction.
- Vieno is a new multi-purpose door that meets the building regulations for new construction and renovation.
- The dB door structure is designed to provide the best possible sound isolation for the entrance door.
- The safe door structures of the fire doors meet most fire safety requirements set for residential and public buildings.
- The combination of an acoustic (dB) and fire door is fire safe and insulates sound well.

Pihla has a long history of making premium external doors. The high quality of our doors is based on our continuous product development, the latest example of which is the entrance door, which combines the dB and fire door structures. Thanks to our diverse door structure options, we can offer a well-functioning Pihla entrance door for every home.

DOORS MADE TO ORDER

Every Pihla door is made to measure, so you can rely on getting exactly the kind of door that you want. You can define the measurements, handedness, frame depth and colour according to your taste and needs. Instead of clear glass, you can choose from a range of glass that blurs the view.

The nail-free glazing available for standard colours makes the door clean and stylish.

GUARANTEED QUALITY

In Pihla's new external doors, special attention has been paid to the quality and neat appearance of the door. We have invested in new painting technology, which is reflected in even better surface quality and durability.

The appearance is finished by new glazing fillets with no nails. As a guarantee of quality, we grant Pihla doors a long 10-year straightness guarantee.

LOCKING OPTIONS

We offer a wide range of locking options for external doors. In addition to standard locking, you can choose the Yale Linus smart lock system that opens with a smart phone, regular key or code. Yale Linus is available in black and silver.

Yale Linus smart lock (left) works with a traditional key, but also with a smart phone or a door code. Yale Linus is installed on the existing door cylinder, Yale Doorman L3 lock (right) doesn't require a separate cylinder.

Our doors can also be fitted with the new, more advanced Yale Doorman L3 smart lock, which works with a smartphone and without a traditional key. In addition to smart locks, our doors can accommodate many different types of electric locks.

MODERN DOORS

Our modern door designs are stylish and distinct. The straight-lined and uncomplicated door models are at their best in buildings with modern architecture.

WOODEN DOORS

NEW STRUCTURE!

The new structure of the Pihla wooden door includes wood fibre insulation, making it an even more environmentally friendly option. The fully wooden door is more energy-efficient and has improved sound insulation.

WOODEN DOOR ECO

Fully wooden doors continue to be a popular choice. Pihla's environmentally friendly wooden doors are handmade by carpenters. The door range is ideal for both modern and more traditional styles. The wooden door is part of the environmentally friendly Pihla ECO product family.

COLOURS AND ACCESSORIES ACCORDING TO YOUR NEEDS

Wooden doors are available with various stain colours, leaving the living wooden surface clearly visible. After tinting, the door is finished twice with durable varnish. Wooden doors can also be painted with a completely covering paint according to Pihla's external door colours. Under the door is a durable aluminium-enforced massive oak threshold. Pihla wooden doors are available with a wide and impressive selection of handles, versatile locks and a modern smart lock that makes it easier to use the door.

LET LIGHT IN

A fixed, fully wooden window can be designed to either side or above the wooden door with the same surface treatment as the door. This makes for an impressive entrance and lets natural light in. The window can also have aluminium cladding.

DOOR LIGHT

EXTERNAL LIGHTS IMPROVE SAFETY

Good outdoor lighting ensures adequate lighting of access routes and entrances. Lighting improves safety and comfort when moving and can indicate the presence of residents. The lighting can also emphasize the facade in a stylish way.

EFFORTLESS AND RELIABLE

The battery-powered Pihla Light is equipped with a motion sensor, so you do not need to remember to switch the light on separately. Instead, the light will always be on when you arrive at your door on dark autumn and winter nights.

The magnetic attachment makes recharging easy. The amount of light and illumination time can also be easily adjusted. The Pihla Light is also an ideal solution for places where installing electrical lighting is difficult.

The USB-rechargeable Pihla Light can be installed, for example, above the entrance door. The motion sensor can be adjusted to an appropriate angle for it to be activated at the desired distance.

PIHLA PATIO

VARMA

- U-value 0.80 ... 1.0

DB

- U-value 0.87
- $Rw+C_{tr}$ 35...39

PATIO EI30

- Fire door, either clear glass or half glazed

GREAT COMBINATION

The Patio door combines two excellent Pihla doors. Patio has the strong plate-structured door leaf used in external doors, and the exterior of the door features the weather-proof aluminium finishing familiar from the balcony doors. Due to the aluminium finishing, Patio goes very well next to Pihla windows.

VERSATILE LOCKING

Versatile locking options enable using the door in different applications and for different needs. Pihla Patio can be equipped with a cremorne bolt with a wind stop or a middle lock used in external doors. Both can be optionally equipped with a lock cylinder, making it possible to lock the door from the outside and using the door, for example, as a second front door for the house. The lock cylinder can be keyed for the same key as the other house doors. A similar handle with the Pihla external door can be selected for a Patio door with middle lock.

MANY MODELS

Patio is manufactured with one and two glass openings, fully glazed, without an opening and as double doors. The size of the glass opening can be freely defined. The frame depths are 130, 170 and 210 mm.

The solid section of the Pihla Patio door can be selected either with a smooth surface or a panel profile. The colour of the exterior aluminium parts can be selected from four different standard colour options.

Balcony door cremorne bolt handle is available in silver and black.

Pihla Patio can be used as a balcony door, patio door, garden door and utility room door. Due to outer aluminium surfaces and matching outer cladding colour options, Patio is easily combined with Pihla windows. The inside surfaces of Patio are always painted. The standard inside colour is white.

NEW!

PIHLA BALCONY DK DOOR

FRENCH BALCONY DOOR

The inward-opening balcony door with one leaf is ideal for French balconies and other small balconies. Equipped with a multi-action bolt, the best features of the door include tightness, stylishness, delicate look and a large glass surface that allows the maximum amount of light into the home.

EASY AND SAFE VENTILATION

The Pihla Balcony DK door has a dedicated tilted position for safe ventilation. The upper edge of the door opens while the bottom edge remains shut. The door leaf stays firmly in place, leaving the area in front of the door free. The vented position is also safe for homes with pets, preventing cats and dogs from running away. The door is also available with security fittings.

STYLISH GLASS BALUSTRADE

Pihla Balcony DK door can be equipped with an optional integrated glass balustrade, delivered readily installed on the door. Once the door is installed, the balustrade is also safely in place.

The Balcony DK door features a convenient vented position.

The Balcony DK door has a half-handle on the inside.

OTHER BALCONY DOORS

WOOD-ALUMINIUM DOORS

In addition to the Patio and Balcony DK doors, Pihla's door range includes three other balcony doors, all with weatherproof aluminium cladding on the outside.

INWARD-OPENING BALCONY DOOR

Ideal for small balconies or French windows, the door has two inward-opening door leaves. The best features of the door include sound insulation, energy-saving and compatibility with Pihla's windows.

INWARD- AND OUTWARD-OPENING BALCONY DOOR

The traditional balcony door has two door leaves. One of them opens outward and the other inward. The two-leaf balcony door provides good heat and sound insulation.

STAINED BALCONY DOOR

Pihla's stained Parveke KK balcony door is a perfect match for stained windows. Parveke KK is a single-leaf outward-opening door.

The stained Parveke KK balcony door shows the wood grain beautifully.

PIHLA ACCESSORIES

Pihla products have an extensive selection of accessories that can be installed at the factory. The most popular optional window accessories are blinds, mosquito sashes, decorative lattices and ventilation valves. Door accessories include handles, lock cylinder, kick plate and doorbell.

NEW!

In the bottom-hung window, the statutory window restrictor is hidden from view inside the window structure.

Straight handle, white

Straight handle, chrome

Oval handle, white

Oval handle, chrome

VENTILATION

EASY VENTILATION

For ventilation, the window can be equipped with ventilation window fittings, which makes the opening and closing of the window or ventilation hatch easy and safe, using one handle.

MOSQUITO SASHES

A mosquito sash, easy to remove from the window for the winter, is available for the ventilation window. The screen material is either plastic or metal. The metal screen can be left in place for winter.

POLLEN SCREEN

Designed especially for people with pollen allergy, Pihla's new Siitepölyverkko pollen screen for ventilation windows keeps insects and pollen out. The fine-mesh screen with special coating filters up to 99% of hay and birch pollen. The mosquito sash with a pollen screen can also be purchased for existing Pihla ventilation windows.

HANDLES

The handle range includes styles from angular to more decorative oval design to suit the design of the window. The pine handle is ideal for a sauna window.

Ventilation windows are equipped with the Autolock roller arm stay, which makes it easy to open the window for cleaning.

Opening window with a ventilation hatch.

BLINDS

The blinds allow you to adjust the room brightness and limit the sun's heat and direct sunlight. They also provide excellent protection from view. It is convenient to purchase the blinds at the same time as the windows and doors, so that they can be installed at the factory (except for fixed windows). There are several colour options available besides the standard white.

INKA

Pihla's integrated Inka blind is stylish and easy to use thanks to the single adjustment knob. The Inka blind is suited to Pihla Varma and Termo windows. Protected between the inner and outer sashes, the slats will stay smart and intact for years, even decades.

Inka blinds are also available with a safe winding mechanism that winds the strings out of sight, keeping them out of the reach of children, for example.

The Inka blind is easy to operate. The amount of light in the room is adjusted by turning the slats with the adjustment knob. The same knob can be used to adjust the blind at the desired height, with the extra lifting string rolled around the string knob.

VEKKI

The easy-to-use Vekki pleated blind is suited to Pihla's fixed windows and single-leaf balcony doors. Featuring a two-fold mechanism, the Vekki pleated blind can be adjusted to the desired height steplessly upward from the bottom or downward from the top.

The Vekki pleated blind features convenient height adjustment. Vekki sits firmly in place when the door is opened and in windy weather with the door open.

VEKKI PLEATED BLIND

Pihla's patio and balcony doors and fixed windows can be fitted with the very durable and easy-to-care-for Vekki blind. In addition to several colour options, Vekki is also available as a pleated blackout blind.

KLIK FRESH AIR VALVE

The KLIK fresh air valve is a window valve for opening windows that automatically preheats the inlet air. The valve highlights design and technical performance. The high air volumes of the valve add comfort to living, bringing plenty of clean and fresh air into the home. The KLIK S straight window valve operates without preheating and is suitable for opening and fixed windows as well as balcony doors.

FRESH INTERIOR AIR

Conveniently positioned in the window sash, the KLIK fresh air valve enables a steady and comfortable flow of fresh air. If necessary, it is also possible to temporarily close the valve completely.

STYLISH

The stylish and easy-to-use valve is available on Pihla's opening window models and is pre-installed at the factory. We recommend valves for homes with mechanical exhaust ventilation. The KLIK fresh air valve is available in white and grey.

Removing the valve for maintenance operations is easy. Filters can be handily replaced without tools.

SEE A
VIDEO OF
KLIK:

[www.pihla.fi/
klik-raitisilma-
venttiili](http://www.pihla.fi/klik-raitisilma-venttiili).

In cold weather, the inlet air is preheated using the heat in the space between the window panes.

In warm weather, fresh inlet air flows directly through the valve.

AUTOMATIC TEMPERATURE ADJUSTMENT

KLIKvalve automatically adjusts the inlet air pre-heating according to the outdoor temperature. In cold weather, the inlet air is preheated using the heat in the space between the window panes. In warm weather, fresh inlet air flows directly through the valve for maximum coolness and comfort.

KLIK FRESH AIR VALVE IN A NUTSHELL

- Stylish and practical design
- Plenty of clean air
- Automatic temperature adjustment
- Excellent sound insulation
- Easy to use
- Easy-to-replace filters
- No feeling of draught

DECORATIVE LATTICES

The appearance of the windows and the house can be enhanced with decorative lattices. Various types of lattices are available for Pihla's products.

LATTICE

The profile widths of the removable lattice are 25, 60 and 90 mm. The lattice is suited to both opening and fixed windows, and offer an easy solution for window cleaning.

110 mm. The fixed lattice is available as a two-colour option.

LATTICE FOR PATIO DOOR

The Patio balcony door is available with either detachable or integrated lattices, which are only manufactured as horizontal and vertical lattices. The profile width of the removable lattice is 24 mm, and the integrated lattice profile width is 26 mm.

FIXED LATTICE

The Varma windows can also be fitted with fixed, glued lattices on both sides of the outer sash glass. The profile widths are 24, 56 and

The most popular lattice models. There are limitations regarding crosses and diamonds.

EXTERNAL DOOR HANDLES

Pihla's handle selection offers suitable models regardless of whether you prefer the traditional or the modern style. The handles are made of brass, aluminium or stainless steel, depending on the model. Surface treatment options vary from polished brass to brushed steel. All handles come with a quick attachment pin for easy installation.

GLAZING

The selection of glazing significantly influences both the product's appearance and its comfort of use. Some windows are meant to bring in as much light as possible, while some windows must ensure privacy. The selection of window glazing is also strongly guided by energy-efficiency and safety.

GLASS ACCORDING TO YOUR NEEDS

Glass thickness is designed for window size and conditions. In addition to clear standard glazing, toughened, sunscreen, safety and noise insulation glazing are also available, as well as patterned and coloured glazing. The Pihla products embody functional and diverse glazing solutions to meet many needs.

SUN PROTECTION

Large window surfaces bring plenty of light in the room, but sunlight can also cause excessive heating of the rooms. Sunscreen glazing

hardly darkens the view to the outside, but significantly reduces incoming heat radiation, glare and harmful UV radiation, while protecting furniture from fading. Sun protection is recommended especially for south- and west-facing windows.

ANTI-FOG GLASS

Window fogging is a common and normal phenomenon, especially in rapidly changing temperatures. However, the problem can be addressed by using an anti-fog coating on the outer windowpane, which reduces the cooling of the outer surface.

PIHLA ANTENNA GLASS

At its best, the home is a comfortable and safe haven for a good life – especially when connections with the outside world work smoothly. The next-generation patented Pihla Antenna glass is a solution to mobile network connectivity problems at home. The Antenna glass enables functional mobile connections to the interior now and in the future, regardless of the operator. So it's good to be home.

solution award

GOOD TO CONSIDER IN PLANNING

Issues connected to mobile phone signals play an important role when planning window renovations or choosing windows for a new construction. It is recommended to have at least one Pihla Antenna glass per room, more in large rooms. The Antenna glass requires no electricity or maintenance. The Antenna glass is installed in the window at the factory.

GUARANTEED GOOD CONNECTION

The integrated antenna* for Pihla windows reduces the signal loss caused by structures of the building and also facilitates a reliable mobile signal indoors. The Pihla Antenna glass also serves as an effective auxiliary glass for a mobile router, when the router is placed near the Pihla Antenna glass. The Pihla Antenna glass utilises Finnish state-of-the-art technology and is made in Finland.

PIHLA ANTENNA GLASS

- is durable and safe and needs no maintenance.
- is a patent-protected solution that provides good mobile phone reception and good connections in the 3G, 4G and 5G networks, regardless of the operator.
- does not affect the window's other functions or limit the use of blinds or other glass options.

The antenna is just a very thin pattern in the glass, hard to detect with the naked eye. The Antenna glass receives the signal from the mobile network and distributes it in beam form throughout the room.

STEALTHCASE

COLOURS

Pihla products are always delivered with finishing. White is popular, but the popularity of other colours has also increased. An external door does not always have to be white, either! We can also manufacture doors and windows in the colour you want, if you provide us with the exact colour codes. We offer four standard colours for external aluminium surfaces.

PAINT

The woodwork of the windows are painted. The paint used is water-soluble acrylic paint, with surface emission class M1. The environmentally-friendly paint produces no toxic emissions. The standard colouring for painted surfaces is white NCS S 0502-Y.

White
NCS S 0502-Y

Note:

Always check the final colour from the colour chart; due to print technology, there may be colour differences in the brochure. The standard colour is white.

STAINING

The woodwork of windows and wood-aluminium balcony doors can also be stained. The staining is done with water-soluble stain varnish. The standard stain colour is a colourless pine, walnut, oak, black and white lacquer. Special colours can be selected, for example from the Teknos colour chart.

Pine
Clear

Walnut

Oak
TM-1802

White lacquer
TM-T5715

Black
TM-1836

ALUMINIUM SURFACES

The external aluminium surfaces of windows and patio doors are powder-coated. The outer sash of opening windows and the outside leaves of balcony doors are also available in two colours; the surface visible on the inside can be white, whereas the exterior can be the same colour as the frame's outer cladding.
